UNLOCK THE FULL VALUE OF PROCORE WITH CONNECTED DATA

DataBlend's connection to Procore is designed to make project and financial data fully accessible, usable, and connected across the broader finance ecosystem.

DataBlend can both extract data from Procore and push data back into it, enabling bi-directional workflows between construction operations and systems like ERPs, planning tools, and reporting platforms. It supports a wide range of Procore objects; including budgets, commitments, cost codes, projects, invoices, and timesheets, so teams can automate data movement instead of relying on manual exports.

PROCORE USE CASES

Synchronise Lists Between Procore and the ERP, CRM or Anything Else

Keep all your lists in sync in either direction - Projects, Companies, Company Vendors, Cost Types/Codes and more. Move beyond simple synchronisation with any rules-based process you require, such as creating Projects in Procore once CRM opportunities reach a certain stage.

Keep the Financials Up to Date

Ensure that the ERP always has the latest information based on activity in Procore, including direct costs (including payroll), payments, purchase orders and requisitions - mapping and formatting as needed.

Distribute Budget Changes

Update your forecasts with field data within Procore, but allow them to automatically update to anywhere else in the business, be it a specific budgeting tool or a database for reporting.

Many Procore customers leverage DataBlend's extensive library of GL and ERP connectors, but that's just the start. We also support a wide range of other critical systems, including CRMs, payroll and HR platforms, databases, planning and consolidation tools, reporting solutions, and operational systems.

Put simply; if it can connect, DataBlend can integrate it. Alongside our growing catalog of pre-built connectors, we can quickly establish new connections as part of an implementation, support on-premise environments, and seamlessly work with flat files via secure FTP, email, or file-sharing platforms like Dropbox and SharePoint.

PROCORE®

DataBlend empowers Procore and ADP customers by:

- Eliminating manual CSV or Excel extractions, transformations, and uploads
- Keeping data across both systems in sync
- Ensuring timely and accurate reporting
- Eradicating human errors

Integrate Procore To Your Tech Stack With DataBlend

DataBlend can transform data across multiple sources, including:

- Field Mapping (mapping fields from one system to another)
- Concatenation (combining fields and/or values together)
- Flip Signs (changing sign from + to – or vice versa on number or currency fields)
- Substring (parsing out sections of values)
- Joins (combining fields from two or more tables)
- If statements
- Date Formatting (changing date fields into various formats. Mm/yy, mm/dd/yyyy, etc)
- Find/Replace (find a specific set of values within a field and replace it with something else)
- Filter (remove or display records based on certain criteria)
- Pivot data to required format

MORE THAN JUST MOVING DATA

DataBlend also offers:

- **Scheduling:** As simple as every day at 2am, or more involved such as every day at 2am, except for the last day of the month where we need it every 15 minutes.
- **Notifications:** On errors, of course, but also on success! Start your day with an email letting you know that everything is up to date and ready to go.
- **Data Quality Reporting:** Otherwise known as checking your data! Only let through data that has everything you need and email the relevant people to let them know they need to fix the problems – all without your involvement.

INTEGRATION TO PROCORE CAN BE EASY!

DataBlend takes the stress out of integration. We understand what is important to Procore customers and invest in building the connections you need to run an efficient and scalable operation. DataBlend makes the process of getting all your integrations up and running straightforward!

ABOUT DATABLEND

DataBlend, an eOne Solutions company, is an integration software (iPaaS) designed to optimize the operations of finance and accounting teams. Featuring a no-code, low-code user interface, DataBlend allows accounting and finance professionals to create secure and worry-free data integrations. CFOs, controllers, and their teams at over 1200 companies rely on DataBlend to automate the flow of data across their technology stack (e.g., ERP/GL, CRM, POS, HR/payroll, and financial reporting.) Visit www.datablend.com to learn more.
